## HIGH PRESSURE LAMINATED PLYWOOD

### **Brief Instruction:**

High Pressure Laminated Plywood (HP Plywood) is plywood overlaid by Fireproof Laminates on Face and Back. The HPL is a kind of Multi-Layer of Fusing materials of kraft paper saturated with phenolic resin, and on Top will be the Melamine Saturated Decorative Paper. Compared to normal Phenolic Film Faced Plywood and Melamine Faced Plywood, HPL plywood have advantages on Function of Fireproof and Oil Resistance. Based on above properties, HPL Plywood are normally used for Kitchen Furnitures making.

### **Specification:**

| Face/Back | Core Materials        | Glue                | Size        | Thickness |
|-----------|-----------------------|---------------------|-------------|-----------|
| HPL       | Birch/Hardwood/Poplar | WBP / MR&E1 / MR&E2 | 1220*2440MM | 6-30MM    |

## PROCESSED PLYWOOD

### **Brief Instruction:**

Processed Plywood is produced according to clients' request based on Normal Plywood. Depended on the final application of the Plywood, Clients always need to deep-processed when original materials arrived. Always, It waste time, materials, and money. Considering this, we have noticed the enlarging demand of Deep-Processed Plywood processed in origin place. So we invested in machines such as Grooving Machines, Grinding Machines, Laser Cutting Machines. With these equipments We can provide service of grooving, screw hole making, Grinding special edging etc.

### **Specification:**

| Available Processed Plywood Species  |
|--------------------------------------|
| Tongue&Groove Plywood                |
| Plywood Cable Reel                   |
| Molded Plywood                       |
| Molded Plywood Parts for Furniture   |
| Other Digital Control Cutted Plywood |
