LAMINTAED VENEERED LUMBER

Brief Instruction:

Laminated veneer lumber (LVL) is a strong wood panel product close to plywood except that most veneers are parallel and larger dimensions are available. Veneers are scarf-jointed except the middle veneers which are butt-jointed. These joints are staggered vertically in order to minimise the effect of joint on the strength on LVL. Compared to Plywood, LVL have advantages of Large&Adjustable Dimensions and not easy to Warp. LVL norally used for Structural Purpose such as Scaffolding Beam, Construction Frameworks and Furniture Framework etc

Specification:

Materials Species	Length	Width	Glue	Thickness
100% Pine /100% Poplar / 100% Hardwood	Up to 12000MM	Free Width	WBP	10-200 MM

LAMINATED SCANTLING

Brief Instruction:

Laminated Scantlings is a Laminated Timber for structure purpose. Compared to Solid Wood, The scantling have more stable quality and not easy to be out of shape, which make the Door or Window more durable. Many kinds of hardwood can be used to produce scantlings such as Okoume, Meranti, Pine, Larch, Oak etc. The Glue normally is accord with European D4 Standard. Normally, the Laminated Scantlings are used for Door&Windows Structures. With the different type of Wood Materials, the Door or Window will be have excellent view and properties.

Specification:

Wood Species	Glue	Dimension	Length
Okoume/Oak/Larch/Pine	100% Poplar Core	63X86MM, 63X95MM, 63X105MM, 63X115MM, 63X120MM, 63X145MM 72X86MM, 72X95MM, 72X105MM, 72X115MM, 72X120MM, 72X145MM	800-3000 MM

H-20 FORMWORK BEAM

Brief Instruction:

H-20 Beam is specially in construction for Carrying Plywood or other Shuttering Panel.

Specification:

Wood Species	Flange	Web Board	Glue	Length(MM)
Chinese Pine/Radiated Pine	Sawed Pine Lumber / Pine Laminated Veneered Lumber	Pine Plywood	WBP	1800/ 2450/ 2900/ 3300 / 3600/ 3900 / 4200/ 4500/ 4600/ 4800/ 5900
